The image shows a battle scene from a role-playing game. The battlefield is a flat, sandy area. On the left, three party members are positioned: a character in a dark uniform with a hat, a character with a red head, and a character with dark hair. On the right, two more party members are visible: a character with red hair and a character with dark hair. At the bottom of the screen, a status menu is open, displaying the following information:

Not recommended.

The first 7 minute of the game, you will feel that it may be a very good game, because it got potential. But after fighting the stray wolf, you will lose your head because when you arrive in the inn, Vuk is not even there. In fact NOBODY is even there.

If you ask me why I'm buying this game, the concept of combining rpg and world war is very good. But this game is a dissapointment. Let me sum it up for you

Pros:

-good concept

Cons:

-game is kinda unfinished

-character collision is badly implemented, I mean you can even go to the ceiling of a building by clicking it using your mouse

-no tutorial

-no journal to keep track of your progress

-first battle against wolf is a pain in the\u2665\u2665\u2665\u2665\u2665 1 shot from revolver did an average of 40-60 dmg while a single wolf bite can cause 60-84 dmg

-the most annoying part is that after you kill the wolf, VUK is gone from the game. They should've named him \u2665\u2665\u2665\u2665

No, no, no, no.

Don't buy it until they fix the issue. Over 6 months since people on the forums mentioned that there is no way to continue. This game is a lot of text about pre-WW1 Serbia and a single fight with a wolf. Also Vuk's daughter looks like she is 21 and not a kid.. This is a \u2018Dressed-Up\u2019 Scam. DO NOT reward the Developer Jerk by buying this. It has been broken since release back in May 2017. Instead hit the violation button and report it as broken. Let's try and clean up 'Steam' so that others don't get burnt.
